

Pandas on Macroevolution

Macroevolution is called “the origin of new types.” (p. 11)

**“It is a mistake to claim for macroevolution the status of fact.”
(p. 26)**

“Intelligent design means that various forms of life began abruptly through an intelligent agency, with their distinctive features already intact –” (pp. 99-100)

The formation of new species cannot lead to macroevolution, because in isolation a population will have less genetic variability than in its species as a whole, and so the new species will have too little variability to create “new types.” Speciation can only represent “limited change.” (p. 12)
